

KS7 Climbing wall, for lateral bouldering

Product info

Background lacquered birch plywood, thickness 18 mm. Upper part laminated birch plywood. Plastic climbing holds. Weight limit 80 kg.

The upper part of the climbing wall is light green, blue or grey laminate as standard. Climbing holds of different colors are shaped in such a way that it is easy for the child to get a good grip with their hands and take support with their feet. The climbing area must be designed so that the child cannot hurt him- or herself when he or she drops. It is recommended to equip the underside of the climbing area with padding mattresses.
